

We are pleased to announce that our unique product, the **NELA SHOWER EXCHANGER**, has been awarded 3rd place in the prestigious **E.ON Energy Globe Award 2015**, a contest established to discover the best Eco-saving projects.

A jury consisting of scientists from the Czech Republic's prestigious Academy of Science has chosen our product as one of the 12 finalists from 373 entries. NELA Shower Exchanger was placed 3rd in category Company.

The NELA Shower Exchanger is constructed to recover heat from used shower water. Warm water from the shower drain flows through the NELA Shower Exchanger and pre-warms the cold clean water by approximately 12 degrees Celsius prior to entering the thermostatic mixer tap. The amount of hot water required is therefore lowered, thus in turn saving more than 45% of energy used when compared to conventional shower water heating.

We also specialize in design and production of dedicated waste-water heat recovery exchangers which do not need pre-conditioning or filtering of the dirty waste water. Our range of products include **SUP Exchangers** for large industrial use, such as

laundry rooms, spas, food industry and water parks. For further information regarding our products, please visit www.sakal-ovt.cz.
